Honnavar Food Delivery App — PRD

Oct 8, 2026 · @Achaiah

Problem and vision

Honnavar has no food delivery service, so local restaurants, cloud kitchens and home cooks can only reach walk-in customers. We will build a simple, bilingual (Kannada and English) app that lets people discover local food, order, pay and get it delivered — designed for first-time smartphone users, not a Swiggy or Zomato clone.

Start in Honnavar town, prove the model, then expand to nearby villages in the district.

Users

User	Who they are	What they need
Customer	Families, students, working people, elders in Honnavar	Find food nearby, order in a few taps, pay by UPI or cash
Food partner	Restaurants, cloud kitchens, home kitchens	Receive orders, set menu and hours, get paid reliably
Delivery agent	Local youth with a two-wheeler	See assigned orders, navigate, collect cash, track earnings
Admin	Operations team	Onboard partners and agents, resolve issues, settle payments

Core features (MVP)

Customer app

- Sign up with mobile number and OTP; no passwords
- Discover kitchens by category (Restaurant, Home kitchen, Cloud kitchen), veg/non-veg and "open now"
- Menus with photos, prices and simple add/remove buttons
- Checkout with UPI, cash on delivery and saved landmark-based address

- Live order status: Accepted → Preparing → Picked up → Delivered, plus SMS/WhatsApp updates
- Rate food and delivery with 1–5 stars and an optional voice or text note
- One-tap call to the kitchen or support

Food partner app

- Accept or reject orders with a loud alert
- Edit menu, prices, availability and opening hours
- Daily orders and weekly payout summary

Delivery agent app

- Receive assigned orders, open in Google Maps, mark picked up and delivered
- Track cash collected and daily earnings

Admin panel (web)

- Onboard and verify partners (FSSAI for restaurants, basic hygiene check for home kitchens)
- Assign deliveries manually at first; set delivery zones and fees
- Handle refunds, complaints and weekly settlements

Design for rural users

- **Kannada first:** Kannada is the default, English one tap away; every screen fully translated, not mixed.
- **Pictures over words:** large food photos, icons and colour-coded buttons so low-literacy users can order.
- **Few steps:** order placed in 4 taps or fewer from the home screen.
- **Voice help:** Kannada voice prompts for key steps and voice notes for reviews and addresses.
- **Works on weak networks:** small app (under 15 MB), runs on low-end Android phones and 2G/3G; images load lightly.
- **Landmark addresses:** "near temple / bus stand" plus a map pin, since street addresses are unreliable.
- **Human backup:** a phone or WhatsApp line where staff can place orders on someone's behalf.

Out of scope for MVP

Scheduled orders, subscriptions, coupons engine, loyalty points, grocery delivery, automated dispatch algorithms and in-app chat.

Success metrics (first 6 months)

Metric	Target
Food partners live	30+ (at least 10 home kitchens)
Active delivery agents	10+
Orders per day	100+
Average delivery time	Under 40 minutes
Average rating	4.0 or higher
Repeat customers	40% order again within 30 days

Rollout

1. **Pilot (month 1–2):** Honnavar town, 10–15 partners, 5 agents, manual dispatch.
2. **Stabilise (month 3–4):** refine based on feedback, add more home kitchens.
3. **Expand (month 5–6):** nearby villages and towns in the district.

Open questions: commission vs. flat fee for partners; delivery fee structure; who handles cash settlement with agents.
